Test Evidence

Scenario 1 – Manual end-to-end: Play Stage 1 and view the dashboard funnel

Test description

Play Stage 1 in the browser game, then open the designer dashboard and verify that funnel metrics update to reflect the completed stage.

Steps executed

1. Started the backend using `python app.py`.
2. Started the client using `npm run dev`.
3. Opened the game in the browser.
4. Played and completed Stage 1.
5. Returned to the main menu.
6. Opened the designer dashboard.
7. Navigated to the funnel view.

Expected results

- Stage 1 completion is recorded.
- Dashboard loads without errors.
- Funnel metrics show at least one completion for Stage 1.

Actual results

- Stage 1 completion recorded: PASS
  - Funnel shows Stage 1 with [e.g. `1` completion, `0` failures] after finishing the level.
- Dashboard loads without errors: PASS
  - No visible UI errors; no critical errors in the browser console.
- Game flow (Stage 1 → menu → dashboard): PASS
  - Navigation worked as expected.

Evidence:

- Screenshot 1: Terminal running `python app.py` and `npm run dev`

```
 * Serving Flask app 'app'
 * Debug mode: on

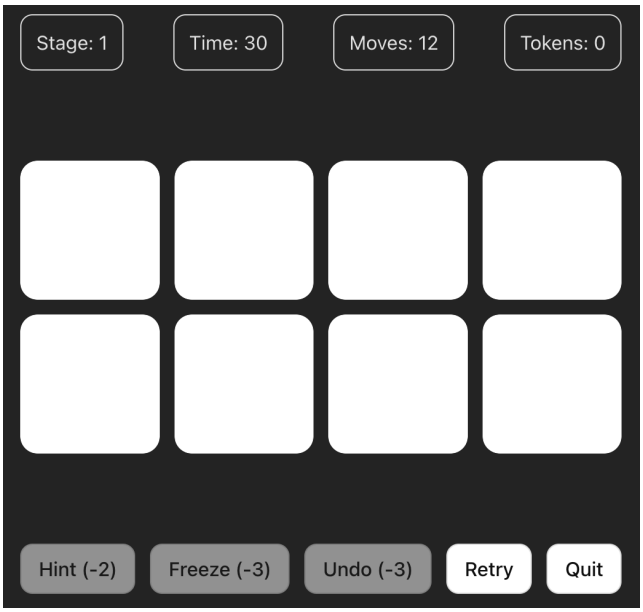
> vite

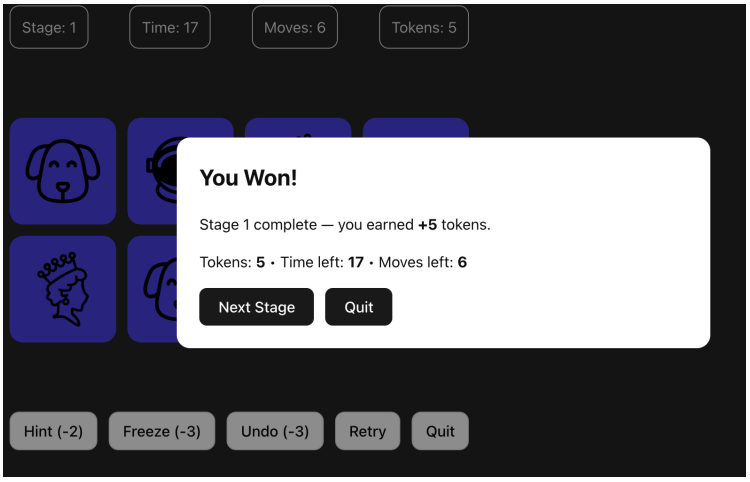
  VITE v7.3.1  ready in 210 ms

  ➜  Local:   http://localhost:5173/
  ➜  Network: use --host to expose
  ➜  press h + enter to show help
```

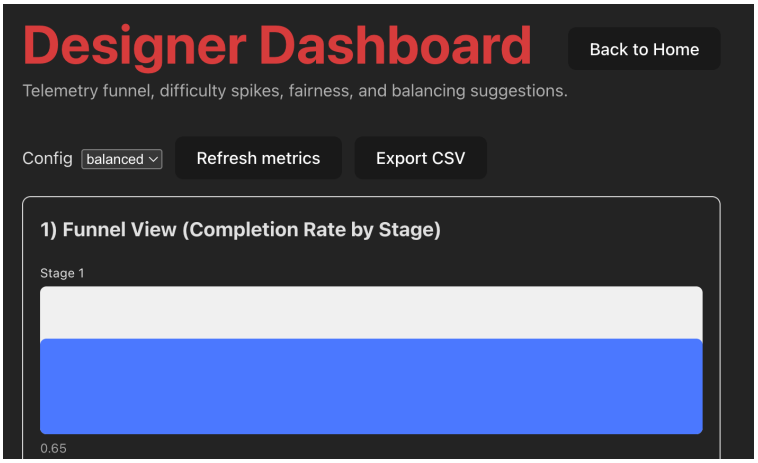
- Screenshot 2: Game showing Stage 1 in progress.



- Screenshot 3: Screen showing Stage 1 successfully completed.



- Screenshot 4: Designer dashboard funnel view loaded.



Conclusion

- Scenario 1 passed. The full telemetry loop for Stage 1 (play → completion → dashboard funnel) is working as intended in the current prototype.
